

WORKSHOP

"Cenozoic onshore and offshore stratigraphic record from the East Antarctic margin: recent results and future directions"

September 18-20 2005, Spoleto, Italy

The aim of the workshop is to: 1) synthesize what it is known about the evolution of the East Antarctic Ice Sheet from the study of glacial processes, glacial stratigraphy-sedimentology, paleoceanography and ice sheet modelling covering both, marine and terrestrial settings ; 2) define future lines of research, and 3) develop collaborations to integrate the data already collected and for collecting new data during future cruises (including activities related to proposed IODP Wilkes Land drilling and IMAGES projects).
